JVD

THE **FRENCH TOUCH**

HYGIENE | EN

THE FRENCH TOUCH

The French Touch is a state of mind. Rooted in the French savoir-vivre, it reflects a desire to make each product unique. Particular attention is given to design to ensure the elegance, the technicality, the ergonomics and the practicality which characterize French products. The importance given to reducing the ecological footprint is also one of the major values of the French Touch.

Dear partners,

The JVD team is delighted to present the new 2018 catalog. This edition is very special because it includes a large number of new products and reveals our new visual identity.

Indeed, after 34 years of continuous development, this change of logo aims to more precisely express the reality of what JVD has become: a global company, with its own R&D and manufacturing center in France, always striving to provide our customers with stylish designer hotel products with exceptionnal quality.

Driven by your long-standing confidence in us, we continuously invest to ensure smart, functional and stylish French innovations: The French Touch!

Thank you again for your confidence and support; giving us motivation and drive to do better for you everyday.

Yours sincerely,

Thierry Launois,
Managing Director

SMART
From children, mobility impaired people to maintenance staff, our products have been designed to be useful and for everyone. Adapted to their environment, they are designed to be safe, practical and ergonomic.

DESIGN
JVD's only design department is now more than 10 years old. Our design teams strive to embody the spirit of the French Touch.

A SENSE OF SERVICE
Providing the best service to our customers and partners is part of the JVD DNA. Our teams are equipped with the professional know-how and humility to ensure the best support is readily provided worldwide.

ECO-DESIGN
From the idea, JVD products are designed to minimize their impact on the planet. From packaging to electrical consumption, every detail is studied and optimized.

HYGIA CONNECT

ASSURING THE RESULT

JVD has always strived to design its products to provide customers with utmost efficiency and optimal comfort. Now, with Hygiaconnect, JVD opens the world of connected objects to all its customers. By monitoring the considerable levels in real time, Hygiaconnect guarantees the best quality service for users.

NO ELECTRICAL INSTALLATION

The range of Hygiaconnect products work on batteries and do not require any electrical connection.

NO WORRY

The products of the Hygiaconnect solution are similar to our current ranges and do not require any special maintenance or precautions.

NO CONFIGURATION

The range of Hygiaconnect products do not require any configuration. They are delivered ready to operate.

SATISFACTION

Hygiaconnect warns if there is a low-level of consumables in the hygiene area and in the local stock.

ANTICIPATE

Hygiaconnect provides an accurate view of the consumables status and use to anticipate actions.

OPTIMIZE

Thanks to Hygiaconnect, it is no longer necessary to check the equipment every time. Consumables are replaced only when necessary.

CHOOSE

Our products are designed for any consumable. You have the choice to use your preferred brand and / or formats.

CONTENTS

As part of our environment friendly approach, the JVD catalog is printed with vegetable inks on ecological paper from sustainable forests. JVD would like to invite all our partners and customers to ensure we have their e-mail address to send this directly in electronic format.

Non-contractual document. JVD reserves the right to change its product characteristics without prior notice. RCS 330 927 476.

RANGES SUITABLE FOR ALL ENVIRONEMENTS

BLACK CLEANLINE RANGE

A WORD FROM THE DESIGNER

"The color black gives the object a more qualitative value. Whatever the atmosphere of the place, a black product is easily fitted in; it can be discrete or very visible. The matte amplifies the qualitative side of the product and makes the solution less messy and more scratch resistant. As part of our search for solutions to minimize our environmental impact, black coloring has given us the opportunity to use recycled plastic."

CLEANLINE WIDE RANGE

A WORD FROM THE DESIGNER

"The Cleanline range has been designed to be both classic and timeless. Its rounded shapes and rectilinear seams allow it to easily and discreetly integrate into any type of sanitary facility. Beveled edges give it modernity and character. Its anthracite grey base makes it possible to lighten the volume. With the ability to customize our customers' logo, simplicity and practicality make this range very successful."

YALISS RANGE

A WORD FROM THE DESIGNER

*"The marked character of the YALISS range seeks to give a fresh image to your bathrooms between sweetness and restlessness.
The products provide new responses to greater requirements: larger capacities, universal or removable tube, even better hygiene while preserving the qualities of the CLEANLINE range (ease of use, personalization and others). To date, it is the most complete range to equip your toilets"*

HAND DRYERS

HAND DRYER

JET AIR - HOT AIR

HOT OR COLD AIR

If the sanitary facility provided is not or little heated, cold drying can be unpleasant. It is therefore recommended to choose an evaporative hand dryer or choose a jet air hand dryer with a heating resistor.

NOISE

Near an office or dining room, the sound of a hand dryer can be a nuisance. Most hot air hand dryers are relatively quiet. Some jet air hand dryers also succeed in combining performance and low noise levels.

MAINTENANCE

Paper dispensers require seamless logistics to avoid remaining empty. Some hand dryers do not require any maintenance, while others require regular emptying of the water tray and changing or cleaning of the air filters.

VANDAL PROOF

In some places, special attention must be paid to vandalism protection. The NF EN 62262 standard provides a clear definition of this protection level via the IK index. IK10 is the highest protection level. An apparatus of this type is able to withstand a blow from a 5 kg/10 lb hammer. Appliances with an aluminum or steel cover are even more robust.

USE

A hand dryer must provide a solution compatible with the level of use of the hygiene facility. For places with low traffic (<50 passages per day), the three solutions are suitable. For places with normal traffic (between 50 and 250 uses per day), the cost of paper can be prohibitive.

For high-traffic areas (between 250 and 400 uses per day), forced-air hand dryers are the only solution guaranteeing controlled cost and fast drying times.

Finally, for intensive use facilities (> 400 uses per day), the hand dryer must be equipped with a brushless or induction motor.

ECOLOGICAL FOOTPRINT

To produce one ton of paper requires 17 trees. Manufacture and transport generate considerable amounts of CO_2. Thus, the French leader of paper consumables generates 30000 tonnes of CO_2 per year for the transport of its paper throughout France.

Hand dryers are the ideal solution to reduce the ecological footprint of the sanitary facility. The latest generation jet air dryers consume very little energy and the lack of consumables makes the transport footprint negligible.

17 arbres
necessary for one ton of paper

IK10
An apparatus of this type is able to withstand a blow from a 5 kg/10 lb hammer

PAPER DISPENSERS

HAND TOWEL SIZES

Folded disposable paper is compatible with Zig-Zag type devices. They are classified according to the sheet folding type:

Interleaved paper: W or Z
Zig zag folded paper: V
Folded paper: C
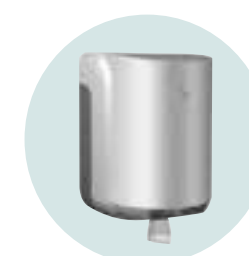

Tubeless roll of disposable paper is compatible with dispenser type devices.

Tubed roll of disposable paper is compatible with automatic cutting dispenser type devices. They come in roles of different diameters and lengths. Caution: some rolls are only compatible with proprietary solutions.

2 POSSIBLE SOLUTIONS

There are two solutions on the market. As part of a proprietary solution, the equipment is generally free or provided at a reduced price. The equipment only works with brand consumables and these are usually more expensive. Conversely, JVD's open-source solutions are sold normally but allow the use of consumables of all brands (including brands offering proprietary equipment).

ECOLABEL

Ecolabel is a European ecological label based on the global approach principle which takes into consideration the life cycle of the product from the extraction of raw materials, including the manufacture, distribution, and use until recycling or disposal after use. The quality and use are also taken into account.

PAPER DISPENSERS

THE ADVANTAGES OF OUR CLEANLINE RANGE

MADE IN FRANCE
Our products, entirely designed and manufactured in France, benefit from 30 years of JVD experience.

SECURE ENCLOSURE
The Cleanline range is equipped with a removable key. A permanent key is also available as an option.

EASY REPLACEMENT OF CONSUMABLES
The Cleanline range is compatible with the majority of consumables on the market; the level is always visible and access is easy.

CUSTOMIZABLE
The Cleanline range is completely customizable and can display the customer's brand.

- pH: 6.0 6.5
- Biodegradable
- Complies with standards 73 / 404CEE and 73 / 405CEE

BULK OR CARTRIDGE

There are two main solutions on the professional soap dispenser market. Proprietary cartridge soap dispensers that need to be replaced when empty. Solutions with a built in container make it possible to use bulk soap (drum). This solution is more economical and more environmentally friendly (less packaging).

GEL OR FOAM SOAP

Soap is available in two forms. Gel soap is more common on the market. There is also foam soap. With a suitable dispenser, this solution allows to reduce the soap consumption by up to 8 and water consumption by up to 50%.

THE PUMP: KEY ELEMENT OF THE DISPENSER

Inside the dispenser, the pump is the part that manages the soap distribution.
The performance of a pump can be measured according to two criteria: its capacity to limit the flow and its durability.

AUTOMATIC SOAP DISPENSERS

Automatic soap dispensers are increasingly installed in sanitary facilities. They are more hygienic, they work without contact with the device. They can also be more economical by limiting flow.

ECOLABEL IS A EUROPEAN ECOLOGICAL LABEL

It is based on the global approach principle which takes into consideration the life cycle of the product from the extraction of raw materials, including the manufacture, distribution, and use until recycling or disposal after use. The quality and use are also taken into account.

1/8
A foam dispenser can be used to reduce consumption by as much as 8 times

BINS

1 Logistics unit (number of items per package)

Since the July 1, 2016, **sorting of recyclable waste at the source is an obligation** in France (Decree No. 2016-288 of March 10 2016 of the Energy Transition for Green Growth Act).

THE SORTING OF FLOWS OF PAPER, METAL, PLASTIC, GLASS AND WOOD IS NOW COMPULSORY.

For whom?

Companies, businesses and administrative bodies who entrust the collection of their waste to a private company or who generate more than 1100 liters / week of waste and who use the public collection service.

THE SORTING OF OFFICE PAPERS AT THE SOURCE IS MANDATORY.

JULY 1, 2016	JANUARY 1, 2017	JANUARY 1, 2018
For organizations with over **100** administrative **positions**	For organizations with over **50** administrative **positions**	For organizations with over **20** administrative **positions**

ASHTRAYS

ANTI-VANDALISM
Equipped with a lock to prevent vandalism.

RUGGED
Thick walls.

OUTDOOR USE
Protected for outdoor use

UV RESISTANT
Treated against UV.

COMPLETE
Supplied with wall or floor mounting kit.

PRACTICAL
Easy to empty; no internal containers.

ASHTRAY FORMATS

Wall mounted ashtrays are designed to be fixed to a wall. Made of painted steel or in stainless steel, they are very discreet and can be installed nearly everywhere thanks to their discreet size.

Totem ashtrays are placed directly on the ground, and may be anchored or not. Whether painted steel or stainless steel, their finesse brings a touch of elegance to smoking areas.

Ashtrays with containers save space by improving the cleanliness of your exterior areas. They allow employees and visitors to dispose of waste such as cups and various packaging.

FRENCH DECREE 2015-337

In Paris as in all other cities of France, cleanliness has become a priority. This, offenders of cleanliness on public roads can be fined €68 on the spot.

Establishments receiving the public are thus required to have solutions installed: ashtrays, bins or combined units as part of this policy.

Moreover, regulations covering terraces has become tougher and many terrace charters have been put in place or updated to oblige owners to provide ashtrays.

READY TO USE
FIXING KIT INCLUDED

PRODUCT ➕ 'S

- Designed for outdoor use
- Rain protection
- Quick and easy to empty
- Smooth surface for easy
  cleaning

FEATURES

- Galvanized steel and epoxy exterior for
  better corrosion resistance
- UV-treated coating
- Scratch resistant grained surface
- Inner zinc tray facilitates extinction of the
  cigarette butt
- Stainless steel stubbing surface
- Key locking system
- Fixing kit included

Dimensions & Capacities:

8 99 501:
- 1.5 L/qt (150 cigarette butts - 0.5 L/qt)
- W.150 x H.255 x D.60 mm

8 99 502:
- 3 L/qt (150 cigarette butts - 0.5 L/qt)
- W.191 x H.355 x D.60 mm

8 99 1170:
- 3 L/qt (900 cigarette butts) + Collector:
  14 L/qt
- W.300 x H.670 x D.140 mm

8 99 1452:
- 3 L/qt (900 cigarette butts)
- W.100 x H.500 x D.64 mm

8 99 1451:
- W.250 x H.990 x D.200 mm

1 Logistics unit (number of items per package)

For premises where food is prepared and where food is delivered to the consumer: Article 3 of the decree of May 28, 1997 and Article 3 of the decree of May 9, 1995 specify that premises must be exempt of any risk of contamination and define obligations to protect against the presence of insect pests. "

OPERATION

An insect trap is a luminous electrical device that attracts flying insects by Ultra-Violet-A radiation (harmless to humans); it then eliminates them, either by electrification, by glueing or by suction.

WHAT INSECTS?

Insect traps are designed to attract and kill flying insects: in particular flies and mosquitoes, but also gnats, wasps, hornets, gadflies and others.

WHERE SHOULD THE INSECT TRAP BE INSTALLED?

For optimum performance, the insect trap should be placed in a warm, dark place, sheltered from drafts and at a height (fixed or suspended).

WHAT ARE IP54 RATING DEVICES?

IP54 units are suitable for **very humid environments** . They are protected against water splashes.
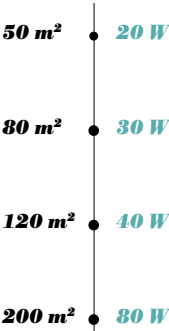

WHAT ARE SHATTERPROOF TUBES?

Unlike standard tubes, the shatterproof tubes are covered with a **protective film** that prevents shattering of glass in the event of an impact. Shatterproof tubes are especially recommended for the food industry.

GLUE OR ELECTRIC GRID?

Electric grid insect traps are non-polluting (no chemicals, no odor). They are safe (the high voltage grid is always protected). They require emptying the recovery pan.

Glue insect traps are non-polluting (no chemicals, no odor). They are safe. They do not cause any sizzling or spattering of insect residues. They are perfectly adapted to places subject to high hygienic restrictions. They simply require to regularly change the sticky sheets.

WHAT POWER FOR WHAT SURFACE?

50 m²	*20 W*
80 m²	*30 W*
